Instructions for Group Assignment

MBDS - 2026

Each group must select **its own dataset** to complete this assignment. Data from Kaggle or other platforms is permitted, provided it does not already include a solved classification model. If in doubt, please consult the professor for validation.

The objective is to develop a **classification model** based on a **chosen target variable**. All methodology and technical decisions must be made independently, utilizing any relevant resources covered throughout the course

EXPECTED OUTCOME

Work in the groups you were assigned to and upload the assignment in zip format to blackboard section created, with your group name (i.e. Group Z.zip) including:

1. A **summary report** of **no more than 4 pages** in which you explain:
    - An executive summary of your main findings
    - A brief description of the technical approach to your analysis along with some details on your best solution with conclusions.
    - Recommendations for managers
    - Any other information that you think is relevant here
2. A **technical annex** supporting your conclusions
3. The **database** that was used, with some explanation about the variables and their coding
4. The final **notebook**
5. The final ppt **presentation** (or any other format chosen) that will be used.

Please note this is not a report addressed to your professor.

One group member must submit the file on Blackboard **before 23:59 on March 22nd**. Please note that the file submitted (PowerPoint or any other format) will be the one used for the group presentation; **no further changes will be permitted**.

- **25% of the final score** of the course will be based on the deliveries. Main points that will be evaluated here are:
    - Executive Summary with main findings,
    - Professional Look (Index, Table of Contents, document structure, etc), report clarity and readiness (highlighting relevant ideas, concise language, etc),
    - Exploration Data Analysis,
    - Data processing, transformations, variable creations, feature selection, etc
    - Technical approach,
    - Validation strategies,
    - Model evaluation,
    - Conclusions & Recommendations,
    - Technical Annex.

- **The remaining 15% of the final grade** will consider:
    - Group presentation
    - Individual presentation and individual ability to answer the questions posed by the professor.

Please note that the professor might ask any question related to the contents seen in ML2, not only related to the work group done.

- Every group will have a maximum of 11 minutes to present their work, plus 5 minutes to answer questions.
- The **order of the presentations** will be randomly assigned on the presentation day.

Remember: 2+ members of any group might report (by sending a private email) over a student who did not have an active participation in the assignment.
